

# Election Theory

**Preference Schedule:** a ranking of preferences for an individual or group

**Plurality:** receiving the most votes

**Majority:** receiving more than half of the votes

**Runoff:** When no majority, voting is recalculated using only the top two choices.

**Sequential Runoff:** When no majority, voting is recalculated after removing the lowest choice. This is repeated until a majority is reached.

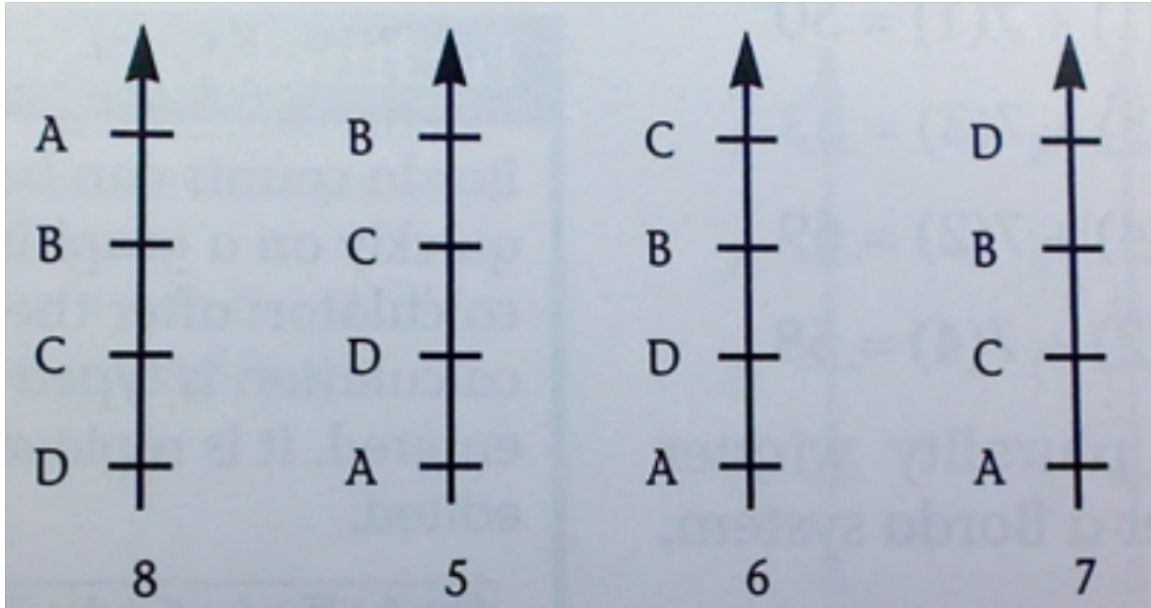

## **Election Theory, cont.**

**Borda Count:** Ranked choices are given values from highest to lowest which are then totaled.

**Pairwise voting:** comparing two choices at a time

**Condorcet Method:** Using ranked choices, compare choices pairwise to get a unanimous winner.

**Approval Voting:** voting for all (as many or as few) the choices that you approve of

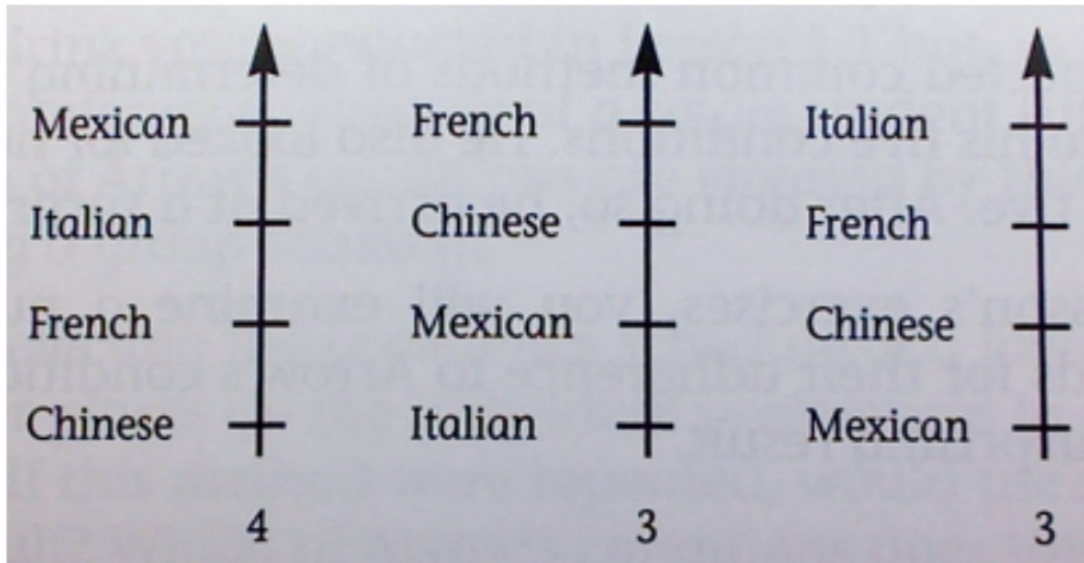

**Plurality:**

**Majority:**

**Runoff:**      **Sequential**  
**Runoff:**      **Runoff:**      **Borda:**      **Condorcet:**

AB,14-23

BC, 19-18

CD,

#### Approval:

# Arrow's Conditions

(for fair group ranking)

- 1. Nondictatorship:** one person's vote should not be considered above group's vote.
- 2. Individual Sovereignty:** everyone should be able to rank and indicate ties.
- 3. Unanimity:** if all prefer something, the group should also.
- 4. Freedom from Irrelevant Alternatives:** if a choice is removed, the order should not change.
- 5. Uniqueness of Group Ranking:** the method used should always produce same result with given preferences
